CARE AND MAINTENANCE FOR YOUR GRANITE WORKSURFACE

Granite is an igneous rock, formed over millions of years deep in the earth's crust. It is naturally extremely hard and resilient, so generally requires very little after care. Following a few basic guidelines will help you to ensure that your Granite retains its natural beauty.

Clean your surface with care using warm water and a cloth. A light gentle detergent may be added if desired. Rinse with clean water and dry off with a gentle cloth. Use Granite polish periodically to enhance shine. **DO NOT USE ANY ABRASIVE SCOURERS OR HARSH CHEMICAL CLEANERS OR BLEACHES.**

Granite is porous. Although your worksurface has been stain sealed before installation, take care to mop up and dry off any spillages as soon as possible, especially wine, fruit juices, harsh chemicals and oil based substances.

Scratches are extremely unlikely, but use a separate chopping board to be safe. Take care when using items such as heavy saucepans especially near the edge of your worksurface to avoid chipping.

We hope that you are delighted with your new Granite worksurface. Some cleaning solution has been provided with our compliments to maintain your worksurface. Please read the instructions on the bottle before use.
